Zung, A self-rating depression scale, Arch Gen Psychiatry, 1965;12:63-70

Most people with depression score between 50-69. The highest possible score is 80.

- * Note that people that score between 40-49 may have some symptoms of depression.
- * Scoring under 50 does not rule out the possibility of having a depressive disorder.
- * Depression screening by itself is never diagnostic, but screening can indicate whether a comprehensive assessment is needed.

Key to Scoring The Zung Self-Rating Depression Scale

Consult this key for the value (1-4) that correlates with responses to each statement. Add up the numbers checked for a total score.
